Oesophageal stricture prevention	European-wide PuraStat registry	Radiation Proctopathy registry	RADA16 Research directions – Long term vision 2-5-10 y
8.00 - 9.30 hrs.	10.00 - 11.30 hrs.	13.00 - 14.30 hrs.	15.00 - 16.30 hrs.
Stricture formation after (circumferential) resections in the esophagus can cause significant problems for the patient. Based upon initial experience with PuraStat, this session intends to discuss the potential role of PuraStat in stricture prevention.	After the initial phase in which data of more than 400 patients treated with PuraStat were collected in Italy, this physician driven registry will be available for gastroenterologists across Europe. The findings from the Italian data will be discussed as well as the advantages of participating in the European Registry.	Radiation Proctopathy is a condition with significant impact on the lifes of the patients. The final design and the roll-out of an international, clinician initiated registry to document the added value of PuraStat in the treatment of patients with Radiation Proctopathy.	This discussion aims at discussing what the most clinical relevant research directions for PuraStat will be for the coming years. The regenerative aspects of PuraStat will play a central role hereby.
